

SMALL RENEWABLE ENERGY INSURANCE SCHEME

Since the introduction of the Feed-in-Tariff in April 2010, many companies, communities and individuals are installing small scale solar, wind or hydro schemes to reduce energy costs and take advantage of the additional income available.

If you are thinking of installing, or have recently installed such a system then Naturesave Insurance, an ethical insurance provider that has been using the insurance industry as a vehicle for sustainable development since 1994, has a new insurance scheme that can comprehensively cover your renewable energy systems at a competitive and affordable premium.

This policy provides cover for:

- **Material Damage**—coverage including storm, lightning, theft and fire;
- **Mechanical Breakdown**—over and beyond any warranty cover;
- **Loss of Revenue**—emanating from either material damage or mechanical breakdown of the renewable energy system;
- **Public Liability**—third party property damage or bodily injury caused by your renewable energy system.

This scheme has been set up to deal with the increasing demand for an affordable alternative for individuals, communities, cooperatives and companies.

Cover is available for wind, solar or hydro systems up to 750 kW in isolation, or as part of a group of project sites, which are individually less than 750 kW.
