

Lewes Eco Open Houses Website

Transition Town Lewes

September 2013

Every September, TTL energy group organises its ECO Open house event, where householders who have made big energy reductions open to the public to showcase what they have done and inspire change. In conjunction with this, we have developed a website to create a year round resource for the community to access the following information:

Case studies of past and present houses – these give details about what was done, materials used and contractors. We also show the breakdown of fuel use and impact on CO2 emissions.

A database of local professionals and contractors – these are reliable local companies that carried out work on the houses opened.

Practical information about implementing measures and local suppliers – we have prepared data sheets on easy to implement measures such as magnetic double glazing and switching to LEDs, giving step by step information and where to get materials.

Current grants and subsidies, with links to DECC, EST, etc. – grants and schemes are constantly changing, but we try to show what's currently available and how to get it.
