

Brendon Energy Ltd

July 2016

Brendon Energy is a community co-operative set up in 2011 to develop renewable energy projects in the Taunton Deane area.

Our vision is for communities everywhere to take ownership of their renewable energy resources – the sun, the wind and the rain. In this way they can combat climate change, decide for themselves what sort of energy plant to host, increase their energy security and build up a Community Fund.

Brendon Energy now has over 100 member investors. We own and operate 14 rooftop solar schemes on community buildings, including schools, sports clubs and a community shop.

In 2016 we are continuing to develop rooftop solar projects, and are working on a very exciting 100kW hydropower scheme, for construction in 2017.

We are grateful to the Naturesave Trust for its generous support of Brendon Energy.
